

**Product Name :**  
Complete Almond Shelling Line

**Product Code :**  
EQMH-CHINA-MY3016007

**Description :**

Complete Almond Shelling Line

**Technical Specification :**

**Almond Shelling Process**

The whole Almond shelling line include 3 steps: grading process, shelling process and shell removing process.

Grading process: feeding hopper, hoisting machine and grading machine

In this process, the almonds can be graded into 3-4 grades. After grading, the almond of different sizes will be automatically separated from different discharging mouth. It also can be used for grading and sieving peanuts kernels by size.

Shelling process: feeding hopper, screw elevator, shelling machine

Adjusting the clearance between processing compression roller can realize processing three different types of almonds at the same time

Shell removing process: feeding hopper, screw elevator, the shell and kernel separating machine(2sets)

**Almond Shelling Machine Features**

High shelling rate of 98%and perfect kernel

It can process various hard shell nuts

Compact structure, perfect design and low crushing ratio

High automatic degree

Capacity: 700kg/h

Power source: 9.08KW
