

**Product Name :**  
Nut Shell and Kernel Separating Machine

**Product Code :**  
EQMH-CHINA-MY3016012

**Description :**

Nut Shell and Kernel Separating Machine

**Technical Specification :**

Nut Shell and Kernel Separating Machines Introduction

Nut Shell and Kernel Separating Machines is used to separate kernels and shell of nuts, as a supporting equipment of cracking machines and sheller. It can be used in many nuts processing line such as walnut, almond and hazelnuts. High separating rate and low broken rate make it a helpful machines in nut shelling equipment.

Advantages of Nut Shell and Kernel Separating Machines

Taking advantage of different gravity of shell and kernel to separate.

High shelling rate, can reach to over 98%.

Good quality, suitable for different nuts.

Easy operation. Just put the mixture in the shaft, then kernel and shell will flow from two sides.

Reasonable design and low broken rate.

Capacity: 200-300 kg/h

Power source: 2.2kw
