

DAIRY PROCESSING PLANT

Food Dairy Processing Plant and Machinery Suppliers

PRODUCT CODE	CATEGORY	ORIGIN
EQMH-CHINA-MY3172004	Dairy Processing Plant	China, exported worldwide

Description

A dairy processing plant supplied as matched equipment rather than as individual machines: milk cooling tank, milk storage tank, milk pasteuriser and processing machine, built from industry-grade materials. The plant supports a wide derivative range, covering milk powder, beverages, cream, yoghurt, butter and ice cream. That range is worth noting at the specification stage, because a plant laid out only for liquid milk is expensive to extend into cultured and frozen products later; the cooling and storage capacity needed for yoghurt and ice cream production is decided at the start, not retrofitted. Equipment is sized and priced for emerging milk processing businesses as well as established dairies, and the plants are supplied on competitive export terms. The useful opening figures for an enquiry are your daily raw milk intake and which of the derivative products you intend to make in year one against later years.
