

VEGETABLE PROCESSING PLANT

Fruit Washer

PRODUCT CODE	CATEGORY	ORIGIN
EQMH-CHINA-MY3172007	Vegetable Processing Plant	China, exported worldwide

Description

A stainless steel fruit washer for the food and beverage industry, built as the first wet stage of a processing line. Washing carries more weight than its position in the line suggests: field soil and surface residue carried into a cutter or pulper end up in the finished product, and no later stage removes them. The unit is made to high tensile strength and dimensional accuracy, and is corrosion resistant, which is the practical requirement for equipment that sits in water every production hour. Maintenance demand is low. Supply voltage is customised to the destination, so the washer can be built to the electrical standard of the country it is shipped to rather than needing a transformer on site. It is supplied new in standard seaworthy packing. Send your throughput and the produce you are washing and the specification can be set against it.

Technical specification

Power supply: customised Material: Stainless Steel Packaging Details: standard sea worthy package
