

BOMB DETECTION EQUIPMENTS

Army Walk-through Metal Detector

PRODUCT CODE	CATEGORY	ORIGIN
EQMH-CHINA-MY3172260	Bomb Detection Equipments	China, exported worldwide

Description

A walk-through metal detector screens people entering a controlled area and is normally the first fixed element of any security line. What decides whether it works in practice is less headline sensitivity than stability: an archway that false-alarms on a passing trolley or a nearby lift motor will be turned down by staff until it detects nothing. Sensitivity, zone count and interference immunity are specified against the actual installation point, and we build to the tender annexure where one is issued.

Technical specification

Build: Manufactured to the specification supplied with the enquiry or tender
