

BULLDOZER

Construction 180HP Mechanical Driven Crawler Forestry Bulldozer

PRODUCT CODE	CATEGORY	ORIGIN
EQMH-CHINA-MY3172434	Bulldozer	China, exported worldwide

Description

A forestry dozer is a crawler machine protected for work among standing and felled timber. The difference from a standard dozer is in what is added rather than what it pushes: guarding over the cab and radiator, protection for cylinders and lines, sealing against debris, and commonly a winch for extracting timber and recovering the machine. At 180 HP in mechanical drive it is specified for land clearing, forest road formation and skidding support, where the machine works away from any service network and has to be repairable in place. Guarding package, winch, blade and cab are all built to the buyer's requirement rather than supplied to a single fixed forestry build.

Technical specification

Engine power: 180 HP Drive type: Mechanical drive Undercarriage: Crawler track Configuration: Forestry Build: Manufactured to the specification supplied with the enquiry or tender
