

BULLDOZER

Construction 230HP Hydraulic High Drive Elevated Sprocket Crawler Bulldozer

PRODUCT CODE	CATEGORY	ORIGIN
EQMH-CHINA-MY3172444	Bulldozer	China, exported worldwide

Description

High drive means the final drive sprocket is raised above the track line rather than sitting in it. Doing that lifts the drivetrain clear of the mud, rock and debris the tracks run through, so shock loads from the ground reach the undercarriage rather than the final drives, and the drives themselves can be serviced without breaking the track. On a 230 HP machine working long hours in abrasive material, that arrangement is usually specified for undercarriage life and downtime rather than for output. Hydraulic drive adds independent track control for tight turning and accurate blade work. We build to the buyer's own specification and quote against a tender's technical annexure where one is issued.

Technical specification

Engine power: 230 HP Undercarriage: Crawler track Configuration: High drive, elevated sprocket Build: Manufactured to the specification supplied with the enquiry or tender

Request a quotation

Send your capacity, voltage and destination port and we will reply with drawings, a price and a lead time within one working day.
