

**Product Name :**  
Pellet Mill Machine

**Product Code :**  
EQMH-CHINA-MY3001050

**Description :**

Pellet Mill Machine

**Technical Specification :**

Flat die pellet machine materials, such as: alfalfa, grass, hay, grain, beans and other crops to be small pellet feed for animals like fish, shrimps, chicken, rabbit, horses, goats, etc.

Flat die pellet machine which powered by electric motor, it is the most common type and it is the best-selling type.

You can use 220V or 380V power supply.

Adopt reduction box with low noise, long lifespan gear and can rotate forward and reverse.

Other manufacturers adopt low cost bevel gear that cannot rotate reverse.

The pressing die and main shaft adopt Cr12, which is more wear-resisting because of high Cr content.

The special heat their hardness to be 60HRC.

Other manufacturers use 45# instead with low hardness and wear-resistance.

The roller, pressing die, main shaft and roller shaft are processed by vacuum heat treatment other than carburizing and quenching (that other manufacturers use) to have higher hardness, wear-resistance.

The sealing of spare parts for small pellet machine is excellent.

The roller shaft is sealed on both sides, while other manufacturers only seal one side.

The feeding hopper applies whole sheet metal edge instead of welding to be more stable and firm.

The compression ratio of small pellet press determines the quality of your pellets.

We have professional team doing the raw material test and have obtained best compression ratio for over 20 kinds of common seen biomass.

The electric components adopt top brands in China to guarantee stable performance.

---

Power	Capacity(kg/h)	Animal feed
	Wood sawdust	
2.2kw-3kw	40-60	70-100
3kw	50-70	90-120
7.5kw	110-140	200-300
11kw	150-180	300-400
15kw	220-280	400-600
22kw	300-350	600-800
