

MEAT PROCESSING MACHINE

Hand Injector

PRODUCT CODE	CATEGORY	ORIGIN
EQMH-CHINA-MY3014042	Meat Processing Machine	China, exported worldwide

Description

Multi-needle injection of muscle tissue ensures a uniform distribution of salting agents in the raw material, increases the amount of brine introduced. The pressure of the injectors should not exceed 1 – 2 bar. A higher pressure of the syringe leads to the rupture of the muscle tissue and the formation of holes in the puncture site, which leads to an uneven distribution of the brine, to a deterioration in color, consistency and taste of the finished product.

Technical specification

The output of the finished product depends on the amount of brine introduced into the product. The more brine, the greater the yield. Injectors of the company are high-performance investors who have high performance and quality:

Made of stainless acid resistant steel, including pumps.

All models are equipped with a smooth brine pressure control.

Have excellent quality of execution of a design and received production.

Low cost against the background of similar imported cars.

They meet all safety standards and sanitary and hygienic working conditions at food industry enterprises.

The device has a housing made of acid-resistant steel

possibility of an accurate injection

pressure adjustment
possibility of increasing the number of needles (option)
brine suction through filter
Connecting the needle to the head using a quick-release coupling

Request a quotation

Send your capacity, voltage and destination port and we will reply with drawings, a price and a lead time within one working day.
