Breakfast Cereal Processing Line

**Product Code :**  
EQMH-CHINA-MY3003061

**Description :**

Breakfast Cereal Processing Line

**Technical Specification :**

Corn flakes is a kind of crisp food, used grain flour as the basic raw material. By the processing line it is processed to flakes instant food which is pressed by particle. The outstanding feature is that it is rich in composite carbon compounds and dietary fiber. At the same time, corn flakes can not only strengthen much trace element, such as vitamins and minerals, but also add cocoa and sugar, such as honey, maltose, etc. After adding into coffee, milk, yogurt, or functional drinks, we can directly eat it. Children can also eat it as sweet and brittle leisure snack food.

The main extruder adopts frequency speed controlling with high automation. The screws are made of the stainless steel and special craft, which has the advantage of durable usage, high pressure, and longer life. The forced lubrication system, which can guarantee the equipment transmission life longer. Auto-temperature control system and self-cleaning, which makes it more convenient. It has the widest range of applications and can produce different products with different equipment and models. Breakfast cereals corn flakes making Machine including bellow equipment
