

Product Name :
Fish Flesh Separator Machine

Product Code :
EQMH-CHINA-MY3014028

Description :

Fish Flesh Separator Machine

Technical Specification :

Fish Flesh Separator Introduction

Fish flesh separator is mainly used for collecting and extracting the fish flesh with stainless steel rotary drum which is designed with screening holes in it.

By extracting the fish flesh from the screening hole, this machine can achieve to separate the flesh from the fish bone, thus saving labour and time.

This fish flesh separator has various models that is not only suitable for large scale production but also for home use.

The extracted fish flesh can be directly used to make minced fillet products such as fish ball, fish noodle, fish gelatin, fish dumplings, etc.

Fish Flesh Separator Features

The fish flesh separator has highlighted features of convenience, delicate design, easy operation, saving energy, safe to use and sanitary.

Driven by enclosed gear, the fish flesh separator is of compact structure, reliable performance and easy maintenance

The machine nose and parts contacting food are made of high class stainless steel which is safe and pollution-free.

The fish deboning machine is of linear design which is easy to clean.

This machine can work with other machines like meat ball machine and refrigerated cabinet, etc.
