

TRAFFIC SECURITY

Automatic Road Block

PRODUCT CODE	CATEGORY	ORIGIN
EQMH-CHINA-MY3064001	Traffic Security	China, exported worldwide

Description

An automatic road block — a powered rising barrier or blocker that closes a vehicle route on command, used at site entrances, military and government gates, car park access and secure perimeters.

The distinction to be clear about is between an access control barrier and a hostile vehicle mitigation blocker. The first manages authorised traffic and will not stop a determined vehicle; the second is engineered to arrest one, is certified against an impact standard, and costs several times as much. Which one you need follows from your threat assessment. Contact EMC Machines Manufactures with your road width, control method and whether an impact rating is required.

Technical specification

This automatic road block is easy to carry specifically developed for police and military personnel to be able to stop vehicles instantly. Any vehicle passing over it, traveling at any speed will have its tires instantly deflated by its spikes quickly, safely and effectively.

The Longest Remote Distance: 45m

Ejection Speed: about 2m/s

Max. Extended Length: about 7.2 m

Request a quotation

Send your capacity, voltage and destination port and we will reply with drawings, a price and a lead time within one working day.
