

FIRE ALARM

Conventional Fire Alarm System

PRODUCT CODE	CATEGORY	ORIGIN
EQMH-CHINA-MY3068001	Fire Alarm	China, exported worldwide

Description

A conventional fire alarm system dividing a building into detection zones, with call points and detectors wired to a control panel that indicates which zone has been triggered.

Conventional rather than addressable means the panel identifies the zone, not the individual device, so somebody has to walk the zone to find the actual detector in alarm. In a small building with a handful of zones that is no hardship and the system costs considerably less to buy and install. In a large or complex building it wastes critical minutes and an addressable system is the right choice. Contact EMC Machines Manufactures with your building layout and zone count for a quotation.

Technical specification

System Components: Fire Alarm Control Panel

Body Material: MS

Automation Grade: Semi-Automatic

Wall Mounted: Yes

Voltage: 12-24 V

Control Keys: Mute Buzzer, Evacuate

Relative humidity: 95%

Current Rating: 500mA
