

ROAD ROLLER

Hydraulic Pedestrian Walk Behind Vibratory Road Roller

PRODUCT CODE	CATEGORY	ORIGIN
EQMH-CHINA-MY3090001	Road Roller	China, exported worldwide

Description

A hydraulic pedestrian walk-behind vibratory road roller for compacting asphalt and granular material in confined areas, trenches, footpaths, patch repairs and around obstructions.

The walk-behind roller exists for the places a ride-on machine cannot reach, and the work it does is genuine compaction rather than a cosmetic pass. Drum width and the vibratory force are what determine the lift thickness it can properly compact; exceeding that gives a surface that looks compacted and is not, which shows up as settlement later. Hydrostatic drive gives better control on slopes. Contact us with your typical working width and material for a recommendation.

Technical specification

Operating Weight: 770 / 800 kgs
Drum Width: 600 mm / 600 mm
Driving Type: full hydraulic driven

Request a quotation

Send your capacity, voltage and destination port and we will reply with drawings, a price and a lead time within one working day.
