

INDUSTRIAL PUMP

Double-Diaphragm Plunger Pump

PRODUCT CODE	CATEGORY	ORIGIN
EQMH-CHINA-MY3098001	Industrial Pump	China, exported worldwide

Description

A double-diaphragm plunger pump for moving abrasive, viscous and solids-laden fluids, used in mining slurry, drilling mud, concrete grout, sludge and dewatering duties.

The diaphragm arrangement is what lets this pump handle material that would destroy a centrifugal pump, because the plunger acts on hydraulic fluid behind a diaphragm rather than on the pumped medium itself, keeping abrasive solids away from the working parts. The result is a pump that tolerates slurry at pressure and has a predictable wear part schedule. Flow and head requirements determine the size. Contact us with your fluid, solids content, flow rate and discharge pressure for a selection.

Technical specification

Double diaphragm plunger pump transfer 50% of the solid & liquid mixture materials (solid materials $\leq 1.5\text{mm}$) by high pressure. The pressure arranged 0-80 kg and the flow 1-15 tons/hour.
