

POWER DISTRIBUTION EQUIPMENT

Power Distribution Transformer

PRODUCT CODE	CATEGORY	ORIGIN
EQMH-CHINA-MY3102001	Power Distribution Equipment	China, exported worldwide

Description

A power distribution transformer stepping medium voltage down to the low voltage used by consumers and equipment, installed at the end of a distribution network serving a building, estate, factory or village. Distribution transformers are specified by rating, voltage ratios and cooling type, and the rating should be set against your actual load profile with headroom for growth, since a transformer run continuously at its limit loses life quickly. Oil-filled units are cheaper and suit outdoor installation; dry type costs more but is used indoors and where oil presents a fire or environmental risk. Contact us with your load, voltages and installation position for a specification.

Request a quotation

Send your capacity, voltage and destination port and we will reply with drawings, a price and a lead time within one working day.
