

POWER TRANSMISSION EQUIPMENT

Power Transmission Transformer

PRODUCT CODE	CATEGORY	ORIGIN
EQMH-CHINA-MY3103001	Power Transmission Equipment	China, exported worldwide

Description

A power transmission transformer operating at the higher voltages used to move bulk power between substations and across distance, as distinct from a distribution transformer serving end consumers. Transmission transformers are larger, higher voltage machines where losses, impedance and short-circuit withstand are engineered against the network they sit in rather than selected from a catalogue. Tap changing arrangements, cooling and protection are specified as part of the network design. These are supplied against a utility or project specification rather than a general description. Contact EMC Machines Manufactures with your network specification and we will quote against it.

Request a quotation

Send your capacity, voltage and destination port and we will reply with drawings, a price and a lead time within one working day.
