

WIND ENERGY GENERATOR EQUIPMENT

Power Generation Transformer

PRODUCT CODE	CATEGORY	ORIGIN
EQMH-CHINA-MY3104001	Wind Energy Generator Equipment	China, exported worldwide

Description

A power generation transformer — the step-up transformer that takes generator output voltage up to transmission or distribution voltage at a power station, wind farm or solar plant.

A generator transformer works under different conditions from a distribution unit, running at or near full load continuously whenever the plant is generating, which makes losses and cooling capacity central to its specification rather than secondary. Voltage ratio is set by the generator on one side and the grid connection on the other, so it is project specific. Contact us with your generator rating, output voltage and grid connection voltage and we will specify the unit.

Request a quotation

Send your capacity, voltage and destination port and we will reply with drawings, a price and a lead time within one working day.
