

FRUIT JUICE PROCESSING PLANT

Orange Juice Process Plant

PRODUCT CODE	CATEGORY	ORIGIN
EQMH-CHINA-MY3142001	Fruit Juice Processing Plant	China, exported worldwide

Description

An orange juice process plant taking whole oranges through washing, grading, extraction, finishing, pasteurisation and either concentration or direct filling.

Citrus plants are built around keeping the peel out of the juice, because the peel oils are bitter and the extraction method determines how much gets in. That is why citrus extractors press halved or whole fruit in a controlled way rather than pulping it. Downstream, the choice between not-from-concentrate filling and evaporating to concentrate changes the plant substantially. Contact us with your daily fruit intake and whether you are producing NFC or concentrate for a plant layout.
