

CIP CLEANING SYSTEM

Small Integration CIP System

PRODUCT CODE	CATEGORY	ORIGIN
EQMH-CHINA-MY3156001	CIP Cleaning System	China, exported worldwide

Description

A small integration CIP system — a clean-in-place unit sized for a compact plant, circulating detergent and rinse solutions through tanks, pipework and equipment without dismantling them.

CIP is what makes a dairy, beverage or liquid food plant viable, because manual cleaning of closed pipework is neither practical nor verifiable. A small integrated system brings that capability to a plant that cannot justify a full CIP station, with the tanks, pumps, heating and dosing in one compact skid. Cleaning validation depends on flow velocity, temperature and concentration being controlled and recorded. Contact us with your plant circuit volumes for a specification.

Technical specification

CIP system is one of necessary cleaning equipments to clean the pipes and containers in dairy industry, beverage, and pharmacy, and acts as a key in ensuring the quality of the goods.

Request a quotation

Send your capacity, voltage and destination port and we will reply with drawings, a price and a lead time within one working day.
