Pipelines Threaded Butterfly Valve

PRODUCT CODE	CATEGORY	ORIGIN
EQMH-CHINA-MY3161001	Installation Pipelines, Valves, Fittings	China, exported worldwide

Description

Pipelines threaded butterfly valve — a quarter-turn butterfly valve with threaded connections for isolating and regulating flow in process pipework, available in sanitary and industrial specifications.

Butterfly valves are chosen for isolation duty where space is tight and cost matters, since they are compact, light and quick to operate compared with a gate valve of the same size. The specification points are the seat material, which must suit the product and the cleaning chemicals, and the pressure rating. For food and dairy duty the valve must be of a design that cleans in place without a crevice to trap product. Contact us with your line size, medium and connection standard.
