

Product Name :
Rotary Oil Spray Machine

Product Code :
EQMH-CHINA-MY3008001

Description :

Rotary Oil Spray Machine

Technical Specification :

Rotary Type Flavoring Machine Introduction For shiny surface, better smell and special flavor, rotary type flavoring machine, also called oil spraying machine is used to spray oil, fat or liquid flavors onto the surface of fish feed pellets coming out of the dryer.

Rotary Type Flavoring Machine Introduction

For shiny surface, better smell and special flavor, rotary type flavoring machine, also called oil spraying machine is used to spray oil, fat or liquid flavors onto the surface of fish feed pellets coming out of the dryer. Compared with the mixer, its speed is a little lower, so pellets will not be damaged during the movement. Besides, Yearmega oil spraying machine is made of stainless steel, so it is also suitable for flavoring puffed food, fried food, potato chips, potato slices, beans, nuts, crisp and so on.

Rotary Seasoning Machine Highlights

fish pellet1. It is made of stainless steel, easy to clean and durable.

Screw fixed conveying and advanced flavoring system ensure efficient and quality seasoning.

Excellent after-adding technology makes it capable of spraying fats, enzymes, vitamins, organic acids, microbial and other nutrients and drugs to the surface of the pellets.

Adding error: $\pm 1\%$, Spraying evenly rate:96% and Spraying Ratio: 2%-20%.

High output with continuously spraying on the pellets.

The final products after coating are more nutritionally balanced, attractant and disease resistant.

Working Principle of Oil Spraying Machine

The material enters from the upper end of the drum, and the liquid grease, attractant, trace elements, etc. are evenly sprayed on the surface of the particles through the built-in sprayer. The oil pump and the heat-insulating oil tube connected to the other end of the spray head have heating functions. The temperature is adjusted on the electric control box so that the additive maintains a certain temperature, and even if the temperature is lower than the bottom, it will not solidify and affect the spraying effect.

Power (kw)	Capacity (kg/h)
0.75	300-400
0.75	600-800
2.2	1000-2000
3	4000-4500
